## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 20, 2004 has been entered.

### ***Response to Amendment***

2. Applicant's amended claim 28 to include the subject matter of claim 29 and cancelled claims 29-34 that were dependent from rejected claim 28. Claims 43-47 have been newly added as depending from claim 28. Although claim 28 was also rejected, a review of the claim in combination of claim 38 shows that the cited prior art fails to teach "registers .... indicating the degree of skew between strobe signal and the associated data bit signal." Thus, the rejection of claim 29 now including the subject matter of claim 28 is withdrawn. On the other hand, claims 20 and 35 previously indicated allowable are found to violate the requirements of 35 U.S.C. 112 first paragraph as set forth below.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 20-24 and 35-42 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 20 and 35 define a method to generate a train signal representing a skew between “a data bit signal” and “a *first* strobe signal,” and to regulate a timing relationship between the data signal and “a *second* strobe signal.” Emphasis added. However, according to the specification, it appears that a skew correction signal from comparing a data bit signal one particular strobe signal regulates only the timing between the data bit and the particular strobe signal, not a timing between the data bit and another strobe signal. Page 7 of the specification at lines 5-7 describes an embodiment where “each of which [multiple strobe signals] is associated with one of the data lines 23 and may be used to compensate a different skew.” There is found no other teaching that one strobe signal is related to another strobe signal for correction of skew. Therefore, the subject matter of claims 20 and 35 are considered as failing to make and/or use the invention.

Claims 21-24 and 36-42 are rejected for the same reason as they dependent from rejected base claims respectively.

*Allowable Subject Matter*

5. Claims 25-28, 43-47 are allowed.
